Alright, let's get started. Quick standup — what did everyone get done yesterday?

Speaker 2 0:04

I finished the API integration for the payment flow. Payment webhooks are working end to end now. I also fixed that bug where duplicate charges were showing up on the dashboard.

Speaker 1 0:14

Nice. That duplicate charge bug was annoying a few customers. Glad that's sorted. Sarah, how about you?

Speaker 3 0:20

I spent most of yesterday on the mobile layout for the transcription page. Speaker labels are rendering correctly now on small screens. I also added the pull-to-refresh gesture.

Speaker 1 0:31

Great. And Marcus?

Speaker 4 0:32

I was investigating the slow transcription times on files over two hours. Turns out the chunking wasn't parallelizing properly. I've got a fix ready for review — should cut processing time by about forty percent for long files.

Speaker 1 0:46

Forty percent? That's huge. Let's get that reviewed today. Any blockers anyone needs help with?

Speaker 2 0:51

One thing — I need access to the production Payment dashboard to verify the webhook signatures are matching. Can someone add me?

Speaker 1 0:59

I'll send you an invite right after this. Anything else?

Speaker 3 1:03

I'm good. I'll start on the notification emails today — the design is already approved.

Speaker 4 1:08

Same here, no blockers. I'll pair with Ben on reviewing the chunking PR if he has time this morning.

Speaker 1 1:15

Sounds good. Let's ship it. Talk tomorrow, everyone.
